

Fiscal Year 2019 (FY19) Data Notes

Political Rights

Source: Freedom House

Freedom House publishes a 1-7 scale (where 7 is “least free” and 1 is “most free”) for Political Rights. Since its Freedom in the World 2006 report, Freedom House has also released data using a 0-40 scale for Political Rights (where 0 is “least free” and 40 is “most free”). The Political Rights indicator is based on a 10 question checklist grouped into the three subcategories: Electoral Process (3 questions), Political Pluralism and Participation (4 questions), and Functioning of Government (3 questions). Points are awarded to each question on a scale of 0 to 4, where 0 points represents the fewest rights and 4 represents the most rights. The only exception to the addition of 0 to 4 points per checklist item is Additional Discretionary Question B in the Political Rights Checklist, for which 1 to 4 points are *subtracted* depending on the severity of the situation. The highest number of points that can be awarded to the Political Rights checklist is 40 (or a total of up to 4 points for each of the 10 questions). Table 1 illustrates how the 1-7 scale used prior to Fiscal Year 2007 (FY07) corresponds to the new 0-40 scale.

New Scale	Old Scale
36-40	1
30-35	2
24-29	3
18-23	4
12-17	5
6-11	6
0-5	7

MCC adjusts the years on the x-axis of the Country Scorecards to correspond to the period of time covered by the Freedom in the World publication. For instance, FY19 Political Rights data come from Freedom in the World 2018 and are labeled as 2017 data on the scorecard (the year Freedom House is reporting on in its 2018 report.)

Civil Liberties

Source: Freedom House

Freedom House publishes a 1-7 scale (where 7 is “least free” and 1 is “most free”) for Civil Liberties. Since its Freedom in the World 2006 report, Freedom House has also released data using a 0-60 scale (where 0 is “least free” and 60 is “most free”) for Civil Liberties. The Civil Liberties indicator is based on a 15 question checklist grouped into four subcategories: Freedom of Expression and Belief (4 questions), Associational and Organizational Rights (3 questions), Rule of Law (4 questions), and Personal Autonomy and Individual Rights (4 questions). Points are awarded to each question on a scale of 0 to 4, where 0 points represents the fewest liberties and 4 represents the most liberties. The highest number of points that can be awarded to the Civil Liberties checklist is 60 (or a total of up to 4 points for each of the 15 questions). Table 2 illustrates how the 1-7 scale used prior to FY07 corresponds to the new 0-60 scale.

New Scale	Old Scale
53-60	1
44-52	2
35-43	3
26-34	4
17-25	5
8-16	6
0-7	7

MCC adjusts the years on the x-axis of the Country Scorecards to correspond to the period of time covered by the Freedom in the World publication. For instance, FY19 Civil Liberties data come from Freedom in the World 2018 and are labeled as 2017 data on the scorecard (the year Freedom House is reporting on in its 2018 report.)

Control of Corruption, Government Effectiveness, Rule of Law, and Regulatory Quality

MCC Normalized Score = WGI Score + median score

Source: World Bank/Brookings Institution

For ease of interpretation, MCC has adjusted the median for low income countries (LICs) and lower-

middle income countries (LMICs) to zero for all of the Worldwide Governance Indicators. Country scores are calculated by taking the difference between actual scores and the median. For example, the unadjusted median for LMICs on Control of Corruption is -0.50 in FY19. In order to set the median at zero, we simply add 0.50 to each country's score. Therefore, as an example, Indonesia's FY19 Control of Corruption score, which was originally -0.25, has been adjusted to 0.25.

The FY19 scores come from the 2018 update of the Worldwide Governance Indicators dataset and largely reflect performance in calendar year 2017. Since the release of the 2006 update of the Worldwide Governance Indicators, the indicators are updated annually.¹ Each year, the World Bank and Brookings Institution also make minor backward revisions to the historical data.

Freedom of Information

MCC FOI Score = (Press) – (FOIA in place) + (Key Internet Controls)

Source: Freedom House, Centre for Law and Democracy / Access Info Europe

This indicator uses a country's score on Freedom House's Freedom of the Press index (Press) as the base. In FY19, MCC uses Freedom of the Press 2017, which covers events in 2016, since Freedom House did not release a 2018 Freedom of the Press report. A country's base score may improve based on data from the Global Right to Information Rating. In FY19, MCC uses Centre for Law and Democracy / Access Info Europe's Global Right to Information Rating (RTI) from 2018. A country's score is improved by 4 points if they have a Freedom of Information law enacted. Data from the Freedom House's Key Internet Controls is used to penalize some countries' base scores. A country's score is penalized 1 point for each internet control in place, for a total penalty of up to 9 points. For FY19, MCC used Key Internet Control data from the 2018 Freedom of the Net report produced by Freedom House.

Freedom House did not release a 2018 Freedom of the Press report. As such, MCC is carrying forward Freedom of the Press ratings from the 2017 release.

On this index, lower is better.

Health Expenditures

Source: WHO

This indicator measures public expenditure on health as a percent of gross domestic product (GDP). MCC relies on the World Health Organization (WHO) for data on public health expenditure. The WHO estimates domestic general government health expenditure (GGHE-D) — the sum of current outlays by government entities to purchase health care services and goods — in million national currency units (million NCU) and in current prices. GDP data are primarily drawn from the United Nations National

Accounts statistics.

Prior to FY19, MCC utilized a WHO indicator named “General Government Health Expenditure” (GGHE) as a percentage of GDP. In 2017, the WHO updated the methodology for how health expenditures are defined, based on the System of Health Accounts 2011. Due to these methodological changes, the WHO no longer produces the indicator previously used by MCC. As a result, in FY19 MCC adopted a new indicator from the WHO named “Domestic Government General Health Expenditure” (GGHE-D) as a percentage of GDP. While the former GGHE indicator included both capital and current expenditures and expenditures financed from domestic and foreign sources of revenue, the new GGHE-D indicator only considers current government expenditures on health that are financed from domestic sources of revenue—excluding capital expenditures and expenditures from foreign sources of revenue. As better data become available, the WHO makes backward revisions to historical data.

Because MCC is using a different indicator from the WHO for FY19, current year data on MCC’s scorecard is not comparable to data found on prior year MCC scorecards.

Primary Education Expenditures

MCC uses the most recent data point in the past six years

Source: UNESCO Institute of Statistics

This indicator measures public expenditure on primary education as a percent of GDP. MCC relies on the United Nations Educational, Scientific and Cultural Organization (UNESCO) Institute of Statistics as its source. For FY19, MCC first determined if a country has a value reported by UNESCO for 2012-2017. If so, the most recent data available within those years were used. If a country did not have UNESCO data for 2012-2017, it did not receive an FY19 score.

For UNESCO data, the GDP estimates used in the denominator are provided to UNESCO by the World Bank. As better data become available, UNESCO makes backward revisions to historical data.

Immunization Rates

MCC Immunization Rate = [0.5 x DPT3] + [0.5 x MCV1]

Source: WHO/UNICEF

MCC relies on official WHO/United Nations Children’s Fund (UNICEF) estimates for all immunization data. MCC uses the simple average of the 2017 DTP3 coverage rate and the 2017 measles (MCV) coverage rate to calculate FY18 country scores. If a country is missing data for either DTP3 or Measles, it does not receive an index value. The same rule is applied to historical data. As better data become available,

WHO/UNICEF make backward revisions to the historical data.

Girls' Primary Education Completion ²

MCC uses the most recent data point in the past six years

Source: UNESCO Institute of Statistics

MCC draws upon data from UNESCO's Institute of Statistics as its exclusive source of data for this indicator. To receive an FY19 score, countries must have a 2012–2017 UNESCO value. MCC uses the most recent year available. As better data become available, UNESCO makes backward revisions to its historical data.

Girls' Primary Education Completion is measured as the gross intake ratio in the last grade of primary, which is the total number of female students enrolled in the last grade of primary (regardless of age), minus the number of female students repeating the last grade of primary, divided by the total female population of the entrance age of the last grade of primary. This indicator was selected since data limitations preclude adjusting the girls' primary education completion rate for students who drop out during the final year of primary school. Therefore, UNESCO's estimates should be taken as an upper-bound estimate of the actual female primary completion rate. Because the numerator may include late entrants and over-age children who have repeated one or more grades of primary school but are now graduating, as well as children who entered school early, it is possible for the primary completion rate to exceed 100 percent.

Girls' Secondary Education Enrollment ³

MCC uses the most recent data point in the past six years

Source: UNESCO

MCC draws upon data from UNESCO's Institute of Statistics as its exclusive source of data. To receive an FY19 score, countries must have a 2012 – 2017 UNESCO value on “gross enrolment ratio, lower secondary (female).” MCC uses the most recent year available. As better data become available, UNESCO makes backward revisions to its historical data.

The Girls' Secondary Education Enrollment Ratio indicator measures the number of female pupils enrolled in lower secondary school (regardless of age), expressed as a percentage of the total female population of the standard age of enrolment for lower secondary education. Lower secondary school is defined as a program typically designed to complete the development of basic skills and knowledge which began at the primary level. Because the numerator may include late entrants and over-age children, as well as children who entered school early, it is possible for the primary completion rate to exceed 100 percent.

Natural Resource Protection

Source: CIESIN/YCELP

In creating the indicator used for the FY19 data, Columbia University's Center for International Earth Science Information Network (CIESIN) and the Yale Center for Environmental Law and Policy (YCELP) relied on 2018 eco-region protection data from United Nations Environment Programme-World Conservation Monitoring Center. As better data become available, CIESIN and YCELP make backward revisions to historical data.

Child Health

CIESIN/YCELP's Child Health Score = [0.33 x Child Mortality] + [0.33 x Access to Water] + [0.33 x Access to Sanitation]

Source: CIESIN/YCELP

In FY19, CIESIN did not update the Child Health indicator due to a lack of updates by the underlying indicator institutions. As such, MCC is relying on FY18 data. In creating the index used for the FY18 data, Columbia University's Center for International Earth Science Information Network (CIESIN) and the Yale Center for Environmental Law and Policy (YCELP) relied on 2015 child (ages 1-4) mortality data, 2015 water access data, and 2015 sanitation access data. If no 2015 updates were available, previous data were applied. Each of the three components (child mortality, access to water, and access to sanitation) is equally weighted (33.3%) in the overall index. Due to the reliance on FY18 data, country scores are reported as 2017 data on the FY19 MCC Country Scorecards. As better data become available, CIESIN and YCELP make backward revisions to historical data.

Fiscal Policy

MCC's Fiscal Policy Score = (2015 + 2016 + 2017) / 3

Source: IMF

MCC relies exclusively on the International Monetary Fund's (IMF) World Economic Outlook (WEO) database for Fiscal Policy data. The fiscal policy indicator measures general government net lending/borrowing as a percent of GDP, averaged over a three year period. Net lending / borrowing is calculated as revenue minus total expenditure. The FY19 score averages the annual data of 2015, 2016 and 2017. As better data become available, the IMF makes backward revisions to its historical data.

The IMF published the net lending/borrowing series for the first time in the 2010 WEO database.

Inflation

Source: IMF

MCC relies exclusively on the IMF's WEO database for inflation data. WEO inflation data reflect annual percentage change averages for the year, not end-of-period data. FY19 data refer to the 2017 inflation rate. As better data become available, the IMF makes backward revisions to its historical data.

Trade Policy

Source: Heritage Foundation

MCC relies on the Trade Freedom component of the Heritage Foundation's annual Index of Economic Freedom for its Trade Policy indicator. The Heritage Foundation scale ranges from 0 to 100, where 0 represents the highest level of protectionism and 100 represents the lowest level of protectionism. FY19 data come from the 2019 Index of Economic Freedom and are treated as 2018 values on the scorecard⁴. As better data become available, the Heritage Foundation makes backward revisions to its historical data.

The equation used to convert tariff rates and non-tariff barriers (NTB) into the 0-100 scale is presented below:

$$\text{Heritage Foundation's Trade Policy}_i = \{[(\text{Tariff}_{\max} - \text{Tariff}_i)] \times 100\} - \text{NTBi}$$

Trade Policy_i represents the trade freedom in country *i*, *Tariff_{max}* and *Tariff_{min}* represent the upper and lower bounds (50 and 0 percent respectively), and *Tariff_i* represents the weighted average tariff rate in country *i*. The result is multiplied by 100 to convert it to a percentage. If applicable to country *i*, an NTB penalty of 5, 10, 15, or 20 points is then subtracted from the base score, depending on the pervasiveness of NTBs.

Business Start-Up

MCC's Business Start-up Score = [0.5 x (Normalized Days to Start a Business)] + [0.5 x (Normalized Cost to Start a Business)]

Source: International Finance Corporation

The Business Start-Up index is calculated as the average of two indicators from the International Finance Corporation's (IFC) Doing Business survey:

- **Days to Start a Business:** This component measures the number of calendar days it takes to comply with all procedures that are officially required for male and female entrepreneurs to start up and formally operate an industrial or commercial business. These include obtaining all necessary licenses and permits and completing any required notifications, verifications or inscriptions for the company and employees with relevant authorities.
- **Cost of Starting a Business:** This component measures the cost of starting a business as a percentage of country's per capita income. The IFC records all procedures that are officially required for male and female entrepreneurs to start up and formally operate an industrial or commercial business. These include obtaining all necessary licenses and permits and completing any required notifications, verifications or inscriptions for the company and employees with relevant authorities.

Since the two sub-components of the Business Start-Up index have different scales, MCC normalizes the indicators to create a common scale for each of them.

MCC Methodology to Normalize Days or Cost to Start a Business:

- *Normalized Days (or Cost) to Start a Business = (Maximum observed value – Country X's raw score) ÷ (Maximum observed value - Minimum observed value)*

For example, to calculate Mozambique's normalized score on the Days to Start a Business indicator, we would first subtract Mozambique's raw score (17) from the maximum observed value (230).⁵ We would then divide the difference between those two numbers (213) by the difference between the maximum observed value (230) and the minimum observed value (0.5). This yields a normalized "days to start a business" score of 0.928. After both of the two sub-components were transformed into a common scale, MCC calculated the Business Start-Up Index using the following formula: *Business Start-Up = 0.5(IFC Days to Start a Business) + 0.5(IFC Cost of Starting a Business)*

In Mozambique's case, its normalized Days to Start a Business score (0.928) is given a 50% weight and its Cost of Starting a Business score (0.692) is given a 50% weight. This yields a Business Start-Up index value of 0.810.

FY19 data refer to the 2019 values reported in the IFC's Doing Business 2019 report and are labeled as 2018 on the scorecard. As better data become available, the IFC makes backward revisions to its historical data.

In 2015, IFC's Doing Business Report added a second city of analysis for Bangladesh, Brazil, China, India, Indonesia, Japan, Mexico, Nigeria, Pakistan, Russia, and the United States. As a result, these countries scores from 2014 to 2019 (displayed as 2013 to 2018 on the MCC scorecard) are an average across two cities. Due to this change, these countries' data from 2014 to 2019 are not comparable to previous year's data.

In 2017, IFC's Doing Business Report disaggregated data for both Cost and Days to Start a Business by

gender. MCC utilizes the simple average of the disaggregated data to represent scores for every country covered in the report. Because IFC historically revised its dataset with gender dis-aggregations, current year data is comparable to previous year's data.

Access to Credit

MCC's Access to Credit Score = [12 x (Depth of Credit) + 8 x (Strength of Legal Rights)] / 2

Source: IFC

This indicator measures the depth of available credit information and the effectiveness of collateral and bankruptcy laws in facilitating lending. It is a composite indicator made up of two indicators from the Doing Business report: Depth of Credit Information and Strength of Legal Rights. The depth of credit information index measures rules and practices affecting the coverage, scope and accessibility of credit information available through either a public credit registry or a private credit bureau. A score of 1 is assigned for each of 8 features of the public credit registry or private credit bureau (or both) and the total is summed for the final score. The strength of legal rights index measures the extent to which bankruptcy and collateral laws protect the rights of borrowers and lenders to facilitate lending. It contains 12 aspects related to legal rights in collateral law and two aspects in bankruptcy law. A score of 1 is assigned for each of the 12 features of the laws and the total is summed for the final score.

In order to give equal weight to each index, MCC multiplies the Depth of Credit Information score by 12 and the Strength of Legal Rights score by 8 and then takes the average.

In the 2015 Doing Business Report, IFC made a number of methodological changes to the Access to Credit sub-indicators, including adding new and more challenging standards for a number of the sub-indicators. The IFC therefore revised a number of countries' scores in accordance to the new standards. These revised scores were applied to the 2015 and 2014 data (reflected on MCC's scorecard as 2014 and 2013 data) but not to previous years. As a result, data from prior to 2014 is not comparable to data after 2014.

Gender in the Economy

Note: In FY19, MCC implemented a revised and expanded Gender in the Economy indicator. Due to the change in methodology, FY19 scores are not comparable to previous year's scores.

MCC adds the number of legal restrictions against women.

Source: World Bank

In FY19, MCC used a revised and expanded version of the previous indicator, utilizing 40 questions in

total from the Women, Business, and the Law (WBL) initiative of the World Bank. The revised indicator measures the government's commitment to promoting gender equality by providing women and men with the same legal ability to interact with the private and public sector. MCC sums the number of restrictions and absence of protections against violence, which then represents a country's score on the scorecard. On this indicator, a lower score is better.

Specifically, MCC adds the number of restrictions from the Accessing Institutions, Using Property, Getting a Job, Going to Court, and Protecting Women from Violence sections of the report to calculate the Gender in the Economy score as noted below:

Accessing Institutions

Countries receive 1/2 point for each question that receives a "no" as the answer in this section, unless otherwise noted below.

- Can an unmarried woman apply for a national ID card in the same way as an unmarried man? (1/2 point for "no")
- Can a married woman apply for a national ID card in the same way as a married man? (1/2 point for "no")
- Can an unmarried woman travel outside the country in the same way as an unmarried man? (1/2 point for "no")
- Can a married woman travel outside the country in the same way as a married man? (1/2 point for "no")
- Can an unmarried woman travel outside her home in the same way as an unmarried man? (1/2 point for "no")
- Can a married woman travel outside her home in the same way as a married man? (1/2 point for "no")
- Can an unmarried woman get a job in the same way as an unmarried man? (1/2 point for "no")
- Can a married woman get a job in the same way as a married man? (1/2 point for "no")
- Can an unmarried woman sign a contract in the same way as an unmarried man? (1/2 point for "no")
- Can a married woman sign a contract in the same way as a married man? (1/2 point for "no")
- Can an unmarried woman register a business in the same way as an unmarried man? (1/2 point for "no")
- Can a married woman register a business in the same way as a married man? (1/2 point for "no")
- Can an unmarried woman open a bank account in the same way as an unmarried man? (1/2 point for "no")
- Can a married woman open a bank account in the same way as a married man? (1/2 point for "no")
- Can an unmarried woman choose where to live in the same way as an unmarried man? (1/2 point for "no")
- Can a married woman choose where to live in the same way as a married man? (1/2 point for "no")
- Can an unmarried woman confer citizenship to children in the same way as an unmarried man? (1/2 point for "no")

- Can a married woman confer citizenship to children in the same way as a married man? (1/2 point for “no”)
- Can an unmarried woman be “head of household” in the same way as an unmarried man? (1/2 point for “no”)
- Can a married woman be “head of household” in the same way as a married man? (1/2 point for “no”)
- If customary law is recognized as a valid source of law under the constitution, is it invalid if it violates constitutional provisions on nondiscrimination or equality? (1 point for “no”)
- Do married couples jointly share legal responsibility for financially maintaining the family’s expenses? (1 point for “no”)

Using Property

- Does the law provide for valuation of nonmonetary contributions? (1 point for “no”)
- Who administers marital property? (1 point for “husband”)
- Do unmarried men and unmarried women have equal ownership rights to property? (1/2 point for “no”)
- Do married men and married women have equal ownership rights to property? (1/2 point for “no”)
- Do sons and daughters have equal rights to inherit assets from their parents? (1 point for “no”)
- Do female and male surviving spouses have equal rights to inherit assets? (1 point for “no”)

Going to Court

- Does a woman’s testimony carry the same evidentiary weight in court as a man’s? (1 point for “no”)

Getting a Job

- Can nonpregnant and nonnursing women work the same night hours as men? (1 point for “no”)
- Can nonpregnant and nonnursing women do the same jobs as men? (1 point for “no”)

Protecting Women from Violence

- Is there domestic violence legislation? (1 point for “no”)
- Are there clear criminal penalties for domestic violence? (1 point for “no”)
- Is there a specialized court or procedure for cases of domestic violence? (1 point for “no”)
- Is there legislation that specifically addresses sexual harassment? (1 point for “no”)
- Are there criminal penalties for sexual harassment in employment? (1 point for “no”)
- What is the legal age of marriage for girls? (1 point for ages)
- Are there any exceptions to the legal age of marriage? (1 point for “yes”)
- Does the law prohibit or invalidate child or early marriage? (1 point for “no”)
- Are there penalties in the law for authorizing or knowingly entering into child or early marriage? (1 point for “no”)

In FY19, MCC used 2018 data from the Women, Business, and the Law website. As better data become available, the World Bank makes backward revisions to its historical data.

Land Rights and Access

MCC's Land Rights and Access Score = [0.5 x Normalized IFAD] + [0.25 x (Normalized IFC Time)] + [0.25 x (Normalized IFC Cost)]

Source: IFAD, IFC

This index draws on 2014-2018 “Access to Land” data from the International Fund for Agricultural Development (IFAD) and 2014-2018 data from the IFC on the time and cost of property registration. Country scores are reported on the Scorecards as 2018 data.

Countries that received a “no practice” score on the IFC’s Time to Register Property indicator were assigned the maximum observed value (i.e. the worst possible score) plus one additional day. Countries that received a “no practice” score on the Cost of Registering Property indicator were assigned the maximum observed value (i.e. the worst possible score) plus one additional percentage point of the property value.⁶

Since each of the three sub-components of this index have different scales, MCC created a common scale for each of the indicators by normalizing them. Please see equations below. Due to the fact that high scores on the IFC indicators represent low levels of performance and high scores on the IFAD indicator represents high levels of performance, it was also necessary to invert either the IFAD normalized scale or the IFC normalized scales. MCC chose to invert the IFAD scale by subtracting each country’s normalized value from 1.

MCC Methodology to Normalize IFAD and IFC Data:

- *Normalized IFAD = 1 – (Maximum observed value – Country X’s raw score) ÷ (Maximum observed value - Minimum observed value)*
- *Normalized Days (or Cost) to Register a Property = (Maximum observed value – Country X’s raw score) ÷ (Maximum observed value - Minimum observed value)*

For example, to calculate Moldova’s normalized score on the IFC Days to Register Property indicator, we would first subtract the maximum observed value (514) from Moldova’s raw score (5.5). We would then divide the difference between those two numbers (508.5) by the difference between the maximum observed value (514) and the minimum observed value (1). This yields a normalized “days to register property” score of 0.9912. After each of the three sub-components was transformed into a common scale, MCC calculated the Land Rights and Access Index using the following formula:

MCC's Land Rights and Access Score = [0.5 x Normalized IFAD] + [0.25 x (Normalized IFC Time)] +

[0.25 x (Normalized IFC Cost)]

In Moldova's case, its normalized IFAD score (0.8264) is given a 50% weight, its IFC Time to Register Property score is given a 25% weight (0.9912), and its IFC Cost of Registering Property score (0.9619) is given a 25% weight. This yields a Land Rights and Access index value of 0.90.

FY19 data on the time and cost of registering property are drawn from the 2019 data in the IFC's Doing Business 2019 Report. FY19 index values also rely upon the most recent year available from IFAD's 2014 – 2018 "Access to Land" data. Historical time series data was constructed using a lag structure that assigns an index value to a country only if that country has data from both IFAD and IFC for the year of interest or the most recent prior year if no data were available for the year of interest. As better data become available, the IFC makes backward revisions to its historical data. No index value is assigned if data from one source exists for a given year, but data from the other source exists only for years after the year of interest.

In 2015, IFC's Doing Business Report added a second city of analysis for Bangladesh, Brazil, China, India, Indonesia, Japan, Mexico, Nigeria, Pakistan, Russia, and the United States. As a result, these countries scores for 2014 and 2015 (displayed as 2013 and 2014 on the MCC scorecard) are an average across two cities. Due to this change, these countries data for 2014 and 2015 are not comparable to previous year's data.

Note on Calculating Medians

In calculating medians for indicators, MCC does not include scores of countries which do not report data (earning an N/A score) for median or percentile rank calculations. For example, if there are 55 countries in the candidate pool and only 50 report data, MCC uses only the 50 reporting data in calculating the median and percentile ranks.

Endnotes

1. Prior to 2006, the World Bank released data every two years (1996, 1998, 2000, 2002 and 2004). With the 2006 release, the World Bank moved to an annual reporting cycle and provided additional historical data for 2003 and 2005.
2. Girls Primary Education Enrolment is used to assess countries with LIC scorecards.
3. Girls Secondary Education Enrolment is used to assess countries with LMIC scorecards.
4. The Index of Economic Freedom is typically released in January, and before FY09, MCC had relied on the most recent of these data for its Trade Policy indicator. However, beginning in September of 2008, the Heritage Foundation has released a preview of the Trade Freedom scores for the upcoming Index of Economic Freedom in early November. The FY19 Trade Policy scores come from the 2019 Index of Economic Freedom.
5. The minimum observed value is the minimum of all 189 countries covered by the Doing Business 2018 report. The maximum observed value is the maximum of all 189 countries covered by the Doing Business 2018 report plus one (day or percentage point) to account for the “no practice” values.
6. As described in the Doing Business in 2007 report, “[w]hen an economy has no laws or regulations covering a specific area — for example bankruptcy — it receives a ‘no practice’ mark. Similarly, if regulation exists but is never used in practice, or if a competing regulation prohibits such practice, the economy receives a ‘no practice’ mark. This puts it at the bottom of the ranking” (World Bank 2006: 74).
